Dave Skinner leads the training department for the National Center for Vehicle Emissions Control and Safety (NCVECS). NCVECS provides training in I/M issues for both administrative and technical personnel on a nationwide basis. Mr. Skinner develops, updates and conducts workshops on topics including OBD II technology, fuels, engine control systems, and catalytic converter performance. In addition, he has written and presented courses addressing quality assurance, future needs, and program management challenges.

Mr. Skinner has also aided in the development of educational brochures, training booklets, and informational sheets regarding OBD II technology. In addition, he has written Computer Based Training (CBT) courses, video courses, and web-based training. A former engineering student, he also brings to an organization the scientific methodology needed to track necessary changes and refinements.

Prior to arriving at NCVECS, Mr. Skinner received a Bachelor of Arts in Marketing from Regis University, where he attended as an adult learner. His work experience includes 15 years in the automotive repair industry, learning the benefits of having a degree the hard way.
